CONVENTIONAL METHODS

FAST-BEAM

Fast Beam brings high-tech into bridge repair and maintenance operations. Fast Beam method replaces conventional scaffoldings used in bridge repair and maintenance operations. The adjustable Fast Beam scaffoldless method is suitable especially for edge beam reparation transforming any manual repair project into an industrial process. Expensive special skills are no longer needed.

Increase Sustainability in your Scaffolding Operations

Fast Beam is easy to install, operate and dismantle. By keeping the process simple, sustainability is easier to achieve. We have ensured that Fast Beam does not add complexity to your operations. Fast Beam is designed to optimize performance in all key areas of your scaffolding operations.

We offer you the combination of efficiency and sustainability.

"With Fast Beam we manage to complete more bridge repair projects per season at a good margin. The Fast Beam weather shield prolongs the repair season to all year round" says CEO Pasi Pelkonen, the founder of MPV.

You are warmly welcome to Fast Beam's showroom in Houston, and visit our website www.fast-beam.com
